About the job

The activities of the Hydraulic Specialist position consist of installation operations of hydraulic systems (hydraulic cylinders), hydraulic auxiliary systems and connecting elements (pipes, hydraulic distributors, etc.). To carry out procedures for installing hydraulic systems according to the customer's drawings and to follow/ensure that all steps are fully respected. The verification and testing of the installation such as: the technical condition of the hydraulic elements, the functionality of the hydraulic and greasing system, the operation and tightness of the hydraulic and pneumatic circuits, the identification of leaks, the replacement of defective elements, are specific duties of the position. The preparation of the functionality reports after the final tests must be done.

Study requirements

Medium, with certificate of professional qualification issued by the competent authorities/bodies.
